**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gagen (U. S. Patent no. 2,616,641).

Gagen discloses: See figures 1 and 2, first poppet 70, second poppet 86, first chamber 68, second chamber 84, third chamber 66, fourth chamber 64, first passage 40, second passage 48, third passage 34, sensing piston 60 with aperture 92, actuator 30,56, first spring 74, second spring 96, third/other spring 62, passageway 82, first valve seat 72, second valve seat 90

Gagen does not disclose the passageway connecting the first and second chambers.

Gagen discloses the passageway connecting the second and third chambers. It would have been obvious to one of ordinary skill in the art at the time the invention was made to connect the passageway between the first and second chambers in the device of Gagen in order to ensure that there is always a positive pressure in the second chamber. This modification connects the supply pressure to the second chamber. The original design connects the brake pressure, which varies over time as the brake is applied and not applied, to the second chamber. The pressure, due to the modification,

biases the assembly away from the second chamber (due to the force balance) which allows for easier actuation of the brakes. This is important in emergency applications.
